

Mathematics Applications Units 3 & 4
Test 3 2018

Section 1 Calculator Free
Time Series Data

STUDENT'S NAME _____

DATE: Thursday 17th May

TIME: 15 minutes

MARKS: 14

INSTRUCTIONS:

Standard Items: Pens, pencils, drawing templates, eraser

Questions or parts of questions worth more than 2 marks require working to be shown to receive full marks.

1. (3 marks)

Below are three cycles of a set of time series data with the 3 point moving averages calculated.

| Period | Value | 3 point MA |
|--------|-------|------------|
| 1 | 502 | |
| 2 | 613 | 524 |
| 3 | 458 | 513 |
| 4 | 467 | 552 |
| 5 | 580 | 487 |
| 6 | 415 | 471 |
| 7 | 418 | 457 |
| 8 | 537 | 450 |
| 9 | 394 | |

One moving average appears to be calculated incorrectly.

(a) On the table indicate clearly which moving average appears to be incorrect. [1]

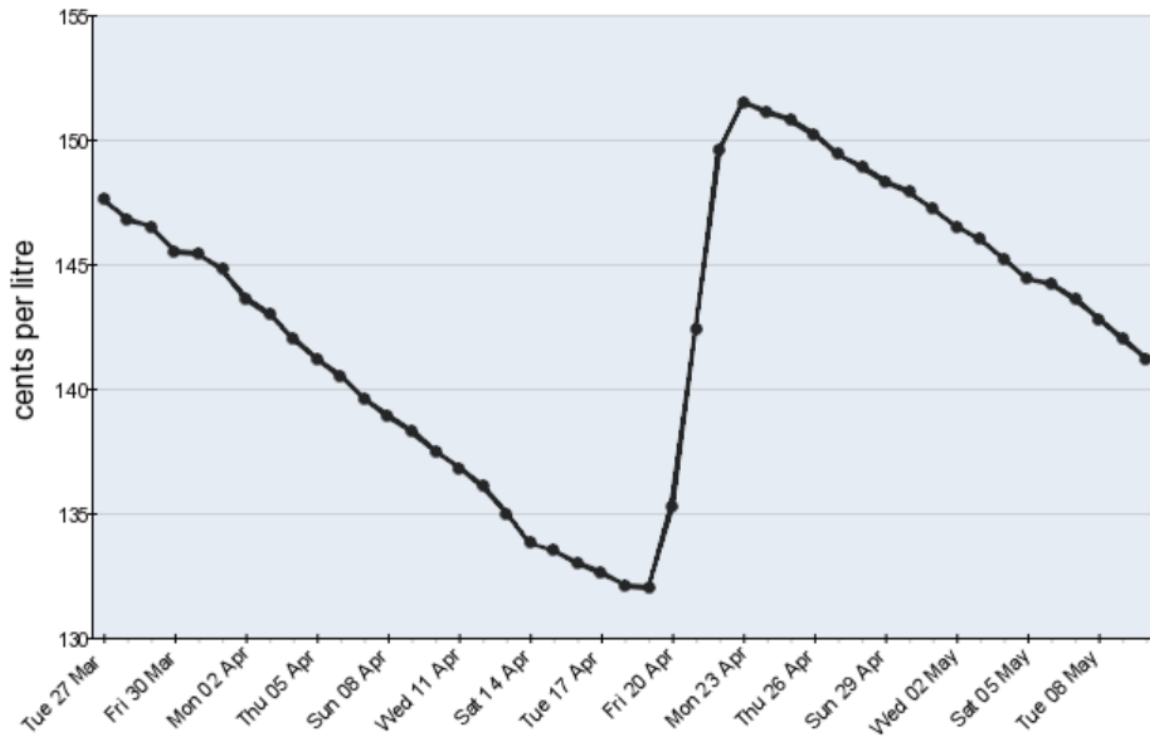

(b) Write down the correct calculation for the value indicated in part (a). [2]

2. (6 marks)

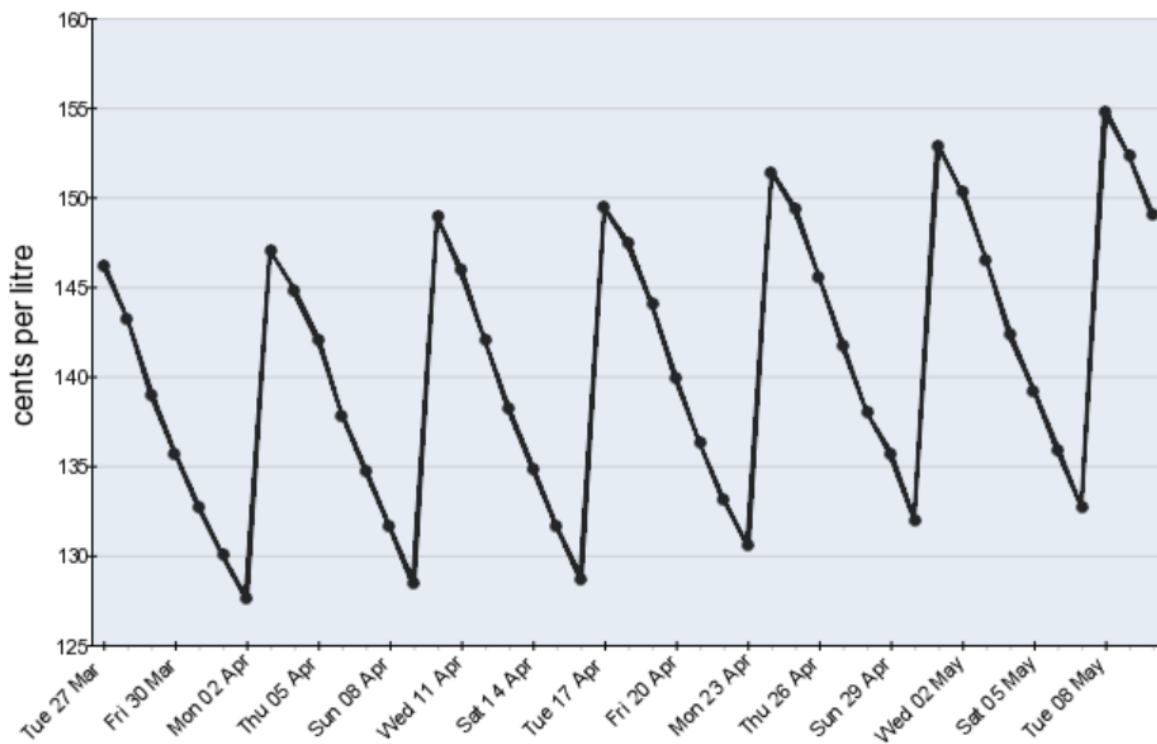

Below are the average prices, in cents per litre, of unleaded petrol in Melbourne and Perth from the 27th March 2018 to 10th May 2018.

[Source: Australia Competition & Consumer Commission]

Melbourne

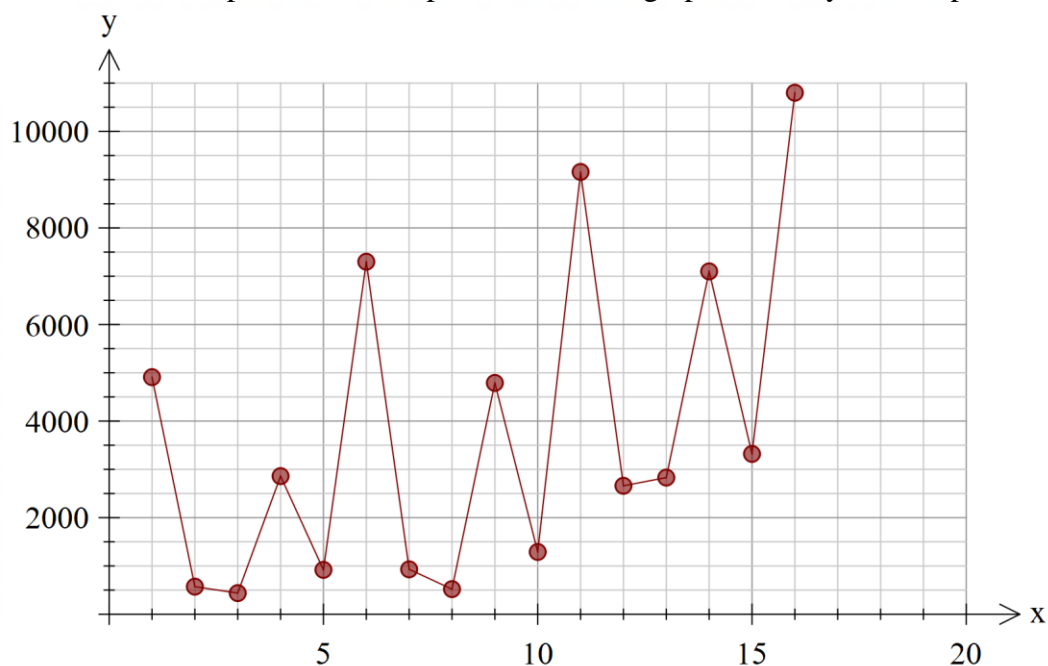

Perth

- (a) Are both graphs examples of time series data? Justify your answer. [2]
- (b) State the length of the cycle of the Perth data and give a possible reason for this. [2]
- (c) Give two reasons why it is difficult to comment on the overall trend for the Melbourne data. [2]

3. (5 marks)

Below is an example of an incomplete time series graph with a cyclic component.

The final four points of the graph are as follows;

| | | | | |
|-----|------|------|------|------|
| x | 17 | 18 | 19 | 20 |
| y | 3250 | 3510 | 8700 | 4090 |

- Add the final four data points to the graph above and connect them to the existing points. [2]
- State the length of the cycle. [1]
- Comment on the overall trend of the data. [1]
- Suggest a possible context for the data that produces the graph shown. [1]

Mathematics Applications Units 3 & 4 Test 3 2018

Section 2 Calculator Assumed Time Series Data

STUDENT'S NAME _____

DATE: Thursday 17th May

TIME: 35 minutes

MARKS: 38

INSTRUCTIONS:

Standard Items: Pens, pencils, drawing templates, eraser

Special Items: Three calculators, notes on one side of a single A4 page (these notes to be handed in with this assessment)

Questions or parts of questions worth more than 2 marks require working to be shown to receive full marks.

4. (4 marks)

Below is an incomplete table showing the Centred Moving Averages for a set of 6 pieces of data. Calculate all possible Centred Moving Averages missing from the table below, given the information provided and indicate clearly where no values are possible.

| | Centred Moving Averages | | | | |
|----------|-------------------------|-------------|-------------|-------------|-------------|
| <i>n</i> | Value | 3 Point CMA | 4 Point CMA | 5 Point CMA | 6 Point CMA |
| 1 | 12.3 | | | | |
| 2 | 14.2 | | | | |
| 3 | 15.7 | 14.6 | 13.8 | | |
| 4 | 13.8 | 13.5 | | | |
| 5 | 11.1 | | | | |
| 6 | 11.9 | | | | |

5. (16 marks)

A student downloaded the total rainfall, in mm per month, from the bureau of meteorology website for December 2014 to December 2017, shown below.

| Year | Jan | Feb | Mar | Apr | May | Jun | Jul | Aug | Sep | Oct | Nov | Dec |
|------|------|------|------|------|-------|-------|-------|-------|------|------|------|------|
| 2014 | - | - | - | - | - | - | - | - | - | - | - | 0.2 |
| 2015 | 0.4 | 28.4 | 22.0 | 56.0 | 68.8 | 100.2 | 98.8 | 102.8 | 46.8 | 19.2 | 17.4 | 17.4 |
| 2016 | 23.4 | 0.8 | 21.4 | 61.6 | 106.0 | 86.4 | 129.4 | 131.6 | 61.8 | 37.8 | 5.6 | 8.6 |
| 2017 | 39.8 | 89.8 | 19.8 | 0.0 | 57.0 | 54.8 | 181.8 | 149.2 | 81.2 | 26.0 | 1.8 | 28.2 |

They decided to use this data to predict the rainfall for each season of 2018 by calculating the season total, yearly average and seasonal effect, shown below.

Note:

| Season | Months |
|--------|---------------------------------|
| Summer | December, January and February |
| Autumn | March, April and May |
| Winter | June, July and August |
| Spring | September, October and November |

| <i>t</i> | Season | Year | Season Total | Cycle Mean | Seasonal Effect |
|----------|--------|-----------|--------------|------------|-----------------|
| 1 | Summer | 2014/2015 | 29.0 | <i>B</i> | 0.2068 |
| 2 | Autumn | | 146.8 | | 1.0467 |
| 3 | Winter | | <i>A</i> | | 2.1519 |
| 4 | Spring | | 83.4 | | 0.5947 |
| 5 | Summer | 2015/2016 | 41.6 | 170.8 | 0.2436 |
| 6 | Autumn | | 189.0 | | <i>C</i> |
| 7 | Winter | | 347.4 | | 2.0340 |
| 8 | Spring | | 105.2 | | <i>D</i> |
| 9 | Summer | 2016/2017 | 132.2 | 175.95 | 0.7513 |
| 10 | Autumn | | 76.8 | | 0.4365 |
| 11 | Winter | | 385.8 | | 2.1927 |
| 12 | Spring | | 109.0 | | 0.6195 |

- (a) Determine the values for A , B , C and D from the table. [4]

- (b) Calculate the seasonal index of each season and enter them in the table below. [4]

| Summer | Autumn | Winter | Spring |
|--------|--------|--------|--------|
| | | | |

- (c) The equation of least squares regression for the deseasonalised values (d) over time (t) is $d = 7.0547t + 117.385$. Predict the rainfall for the following seasons in 2017/2018.

- (i) Summer [3]

- (ii) Winter [3]

- (d) Could either of the predictions from part (c) be considered more accurate than the other? Justify your answer. [2]

6. (13 marks)

A graph of a restaurants profits over the first three weeks of January is shown below. The data has been smoothed by using moving averages and seasonal indices.

Note: Some of the data is missing.

| Week | Day | t | Profit (\$1000s) | Smoothed Data 1 | Smoothed Data 2 |
|------|-------|-----|------------------|-----------------|-----------------|
| 1 | Tue | 1 | 1.28 | | |
| | Wed | 2 | 1.31 | | |
| | Thurs | 3 | 0.27 | | |
| | Fri | 4 | 1.50 | 1.08 | 1.07 |
| | Sat | 5 | 2.10 | 1.09 | 1.05 |
| | Sun | 6 | 0.04 | 0.48 | 1.06 |
| 2 | Tue | 7 | 1.15 | 1.01 | 1.07 |
| | Wed | 8 | 1.17 | 1.03 | 1.06 |
| | Thurs | 9 | 0.51 | 1.30 | 1.05 |
| | Fri | 10 | 1.42 | 1.03 | 1.04 |
| | Sat | 11 | 1.98 | 1.03 | 1.02 |
| | Sun | 12 | 0.06 | 0.72 | 1.00 |
| 3 | Tue | 13 | 1.08 | 0.95 | 0.99 |
| | Wed | 14 | 1.01 | 0.89 | 0.97 |
| | Thurs | 15 | 0.42 | 1.07 | 0.95 |
| | Fri | 16 | 1.33 | | |
| | Sat | 17 | 1.85 | | |
| | Sun | 18 | -0.01 | | |

(a) (i) Which column represents the 7 point moving average? [1]

(ii) Which column represents the seasonally adjusted data? [1]

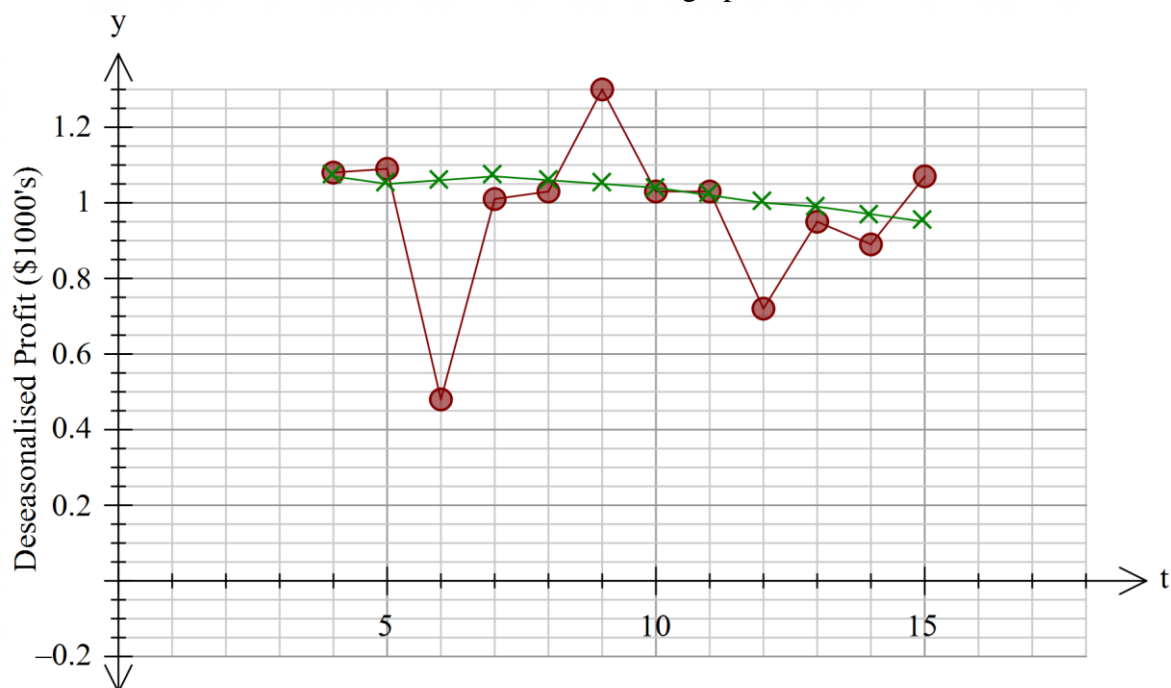

Some of the seasonal indices are given below.

| Tues | Wed | Thurs | Fri | Sat | Sun |
|--------|--------|--------|--------|-----|-----|
| 1.1399 | 1.1308 | 0.3932 | 1.3815 | | |

- (b) Work backwards to determine the Seasonal Indices of Saturday and Sunday. Show all working to justify your calculations. [4]

- (c) Calculate the missing deseasonalised values possible and write them into the original table. [3]

The deseasonalised data from each method is graphed below.

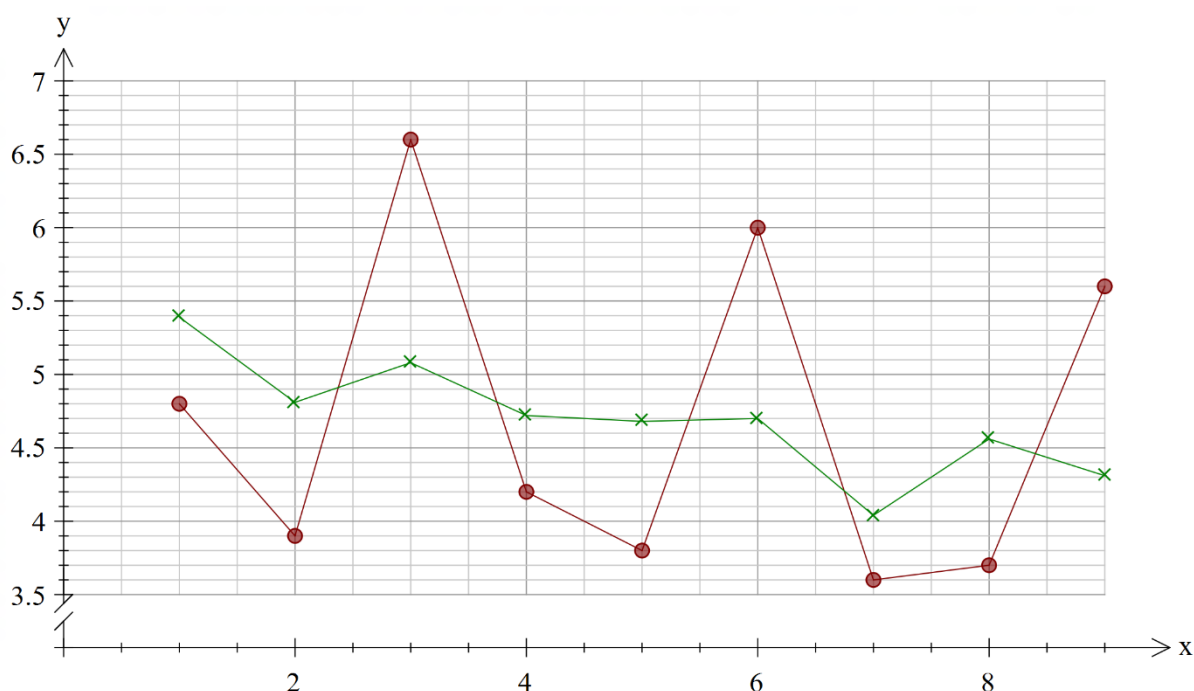

- (d) Fill in the missing deseasonalised values calculated in part (c). [2]
- (e) Comment on the differences in the graphs of deseasonalised data using each method. [2]

7 (5 marks)

The following table shows the calculation of the 3-point moving average used to smooth time series sales data.

| Time Period | Date | | Sales | Yearly Mean | Seasonally Adjusted |
|-------------|----------|------|-------|-------------|---------------------|
| 1 | April | 2015 | 4.8 | 5.10 | 5.39 |
| 2 | August | 2015 | 3.9 | | 4.81 |
| 3 | December | 2015 | 6.6 | | 5.08 |
| 4 | April | 2016 | 4.2 | 4.7 | 4.72 |
| 5 | August | 2016 | 3.8 | | 4.68 |
| 6 | December | 2016 | 6.1 | | 4.70 |
| 7 | April | 2017 | 3.6 | 4.3 | 4.04 |
| 8 | August | 2017 | 3.7 | | 4.56 |
| 9 | December | 2017 | 5.6 | | 4.31 |

| April | August | December |
|--------|--------|----------|
| 0.8907 | 0.8112 | 1.2981 |

- (a) Calculate the line of least squares regression for the deseasonalised data in the form $d = at + b$. [2]
- (b) Plot the line of least squares regression on the graph above. [2]
- (c) The prediction from the least squares regression line for August 2018 is 3.98. Comment on the effect of the seasonal index on this prediction. [1]
